

Claude Cowork · Prompt Pack

Your Simple Claude Cowork System (That Runs Itself)

Eight prompts, ready to copy and paste. Work top to bottom and you'll have your own working system by the end.

5 minutes

NEW TO COWORK? START HERE

Open Claude desktop and point it at a folder on your computer — that folder is your workspace. Copy the first prompt below, paste it in, and answer the questions it asks. Work down the list in order; each prompt sets up the next piece for you.

STEP 1 · THE BODY

Set up your workspace

Claude builds your whole folder structure — root plus one folder per project, with context and memory files in the right places.

PROMPT

Set up a clean Claude Cowork workspace structure for me in this folder. First, ask me two quick questions: (1) What are the 1-3 projects/ventures I want to manage here? (2) One line on who I am and what I do, so you can write my context file. Then create a root CLAUDE.md (my global identity, tone, and rules) and MEMORY.md, plus one subfolder per project — each with its own CLAUDE.md, MEMORY.md, inputs/, and outputs/. Keep every CLAUDE.md tight — every line should change your behavior. Show me the final folder tree when you're done.

STEP 2 · THE BODY

Fill your workspace with context

An interview, one project at a time, that turns empty folders into something Claude actually knows how to use.

PROMPT

Help me populate my Cowork workspace with real content. Go one project at a time and ask me: goals for the next 90 days, my voice and style, my rules and workflows, key facts you should always remember, and what I'm working on right now. Write goals/voice/rules into that project's CLAUDE.md and facts/current state into its MEMORY.md. Then move to the next project. When all projects are done, ask 3-4 questions for the root CLAUDE.md too.

STEP 3 · THE BRAIN

Write a great CLAUDE.md

A focused, five-section interview for any new project folder — use this any time you start one.

PROMPT

Help me write a great CLAUDE.md file for this project. Interview me one section at a time: who I am, what I'm working toward, how to talk to me (push for specifics — "short answers, no em dashes" beats "be professional"), how I work (do's and don'ts), and what you should always know. Then write the file with a clear heading per section. Keep it short — every line must change your behavior.

STEP 4 · THE HANDS · CONNECT

Connect your tools and get a rundown

A read-only sweep of your calendar and inbox — what needs attention, in 30 seconds.

PROMPT

Check my Gmail and Google Calendar and give me a quick rundown of what needs my attention right now — today's schedule in time order, anything to prep for, and any emails from the last 24 hours that need a reply. Skip newsletters and promos. End with the single most important thing I should deal with first. This is read-only — don't send, reply, delete, or change anything.

STEP 5 · THE HANDS · SKILLS

Teach Claude your email voice

Claude studies your real sent emails, then saves a reusable skill that drafts replies in your voice. Review-only — it never sends.

PROMPT

Read my last 20 sent emails in Gmail and study my tone, greetings, sign-offs, and phrases. Show me a summary so I can confirm it sounds right. Then create a skill called "email-response" that drafts replies in exactly that voice whenever I ask, always showing me the draft to review — never sending, replying, or changing emails on its own.

STEP 6 · THE HANDS · SKILLS

Build your skills dashboard

A live, searchable dashboard of every skill you have installed — refreshes itself each time you open it.

PROMPT

Build me a Live Artifact showing all the skills I have installed in Cowork — a visual dashboard I can open any time. For each skill, show its name, a one-line description, its trigger phrase, and category. Include a search box and category filters, and make sure it pulls my current skills fresh every time I open it.

STEP 7 · THE HANDS · SCHEDULED TASKS

Your morning briefing on autopilot

A scheduled task that builds a fresh morning dashboard every day at 8am from your calendar and inbox — read-only.

PROMPT

Set up a scheduled task, every day at 8am, that builds a morning admin dashboard as a single HTML file: today at a glance, calendar in time order with any gaps flagged, email sorted into "needs reply today / time-sensitive / can wait," and a top-3-priorities section based on all of it. Read-only — never send, reply, or change my calendar or inbox.

STEP 8 · THE HANDS · SCHEDULED TASKS

Weekly skills audit

Runs every Monday at 9am, finds any new skills that landed that week, and tells you which are worth keeping.

PROMPT

Set up a scheduled task called "weekly-skill-audit" that runs every Monday at 9am. Each run: find any SKILL.md files modified in the last 7 days across my workspace and plugin folders, analyze each one (what it does, who'd use it, whether it needs outside accounts), sort into "worth using" vs. "skip," and deliver a clean, jargon-free summary as a markdown file.

Build your system one step at a time. Body → Brain → Hands.
