What This Is

Claude Code is already powerful out of the box — you ask, it builds, you ship. Most people stop there, without realizing hundreds of free community skills already exist that drop into any project in under a minute.

THE CORE IDEA

You don't need to build skills from scratch — the community already built 380+ of them. Your job is knowing where to look and which ones to grab first.

The Big Libraries

Awesome Agent Skills *380+ skills · community + official*

The biggest collection out there — includes official contributions from Anthropic, Google, Vercel, Stripe, Cloudflare, and Netlify. If you grab one library, grab this one.

Claude Command Suite *148 commands · 54 agents*

Slash commands and agents covering code review, feature creation, security audits, and architecture analysis.

Production-Ready Commands *57 commands · 5 categories*

Battle-tested across Claude Code Essentials, Full-Stack Dev, Security Hardening, Data/ML, and DevOps.

Curated Lists (Start Here If Overwhelmed)

Awesome Claude Code *Curated list / web directory*

The most organized index of skills, hooks, and agent orchestrators.

Awesome Claude Skills *20+ skills · beginner-friendly*

Includes `/brainstorm`, `/write-plan`, `/execute-plan` — a clean, focused first install.

awesomeclaude.ai *Web directory · no install needed*

Browse the full collection before cloning anything — search by category, grab only what you want.

How to Install a Skill

1 **Grab the .md files**

Clone the whole repo or copy just the skills you want.

2 **Drop them in the right folder**

`your-project/.claude/commands/` for project-only, `~/.claude/commands/` for everywhere.

3 **Restart Claude Code**

Type `/` and the new skills show up as slash commands.

Pro Tips

1 Review before installing

Skills run with full project access — open the .md file and read what it does first, same as vetting a browser extension.

2 Project vs. global

Most skills are safer kept project-specific rather than loaded everywhere.

3 Steal patterns, not just files

The .md format is simple — soon you'll be writing your own.

Do This Today

01 Browse awesomeclaude.ai for five minutes and bookmark anything useful.

02 Clone Awesome Agent Skills and pick 3 that fit your work.

03 Drop them in `.claude/commands/`, restart, and run one.
