

A field guide to Google's free AI lineup

7 Free Google AI Tools.

Free, from Google, and mostly hiding in plain sight. Apps, design, music, marketing, and your own personal AI tutor.

Why This List Exists

AI doesn't have to cost a fortune. Google quietly built a whole stack of free tools scattered across labs sites and experiments pages — most people never find them. Here are the seven worth knowing.

HOW TO USE THIS

Pick one. Sign in with your Google account and play with it for ten minutes. You'll find the one or two that fit your work — ignore the rest.

1 • Google Stitch stitch.withgoogle.com

Type "a fitness app that tracks running" and get back full UI mockups — buttons, screens, layout, colors. Great for sketching an idea before hiring a designer.

2 • Google AI Studio Build aistudio.google.com

Describe an app and it ships working code — deployable the same day, no coding required. Pairs well with Stitch: design the look first, then build the working version.

3 • Google Opal opal.google

No-code AI workflow builder — drag and drop steps like Lego blocks. Good for an email summarizer or a "YouTube link to blog post" pipeline.

4 • NotebookLM notebooklm.google

Upload docs, PDFs, or YouTube videos and it becomes a personal AI tutor — answers questions, summarizes, even generates a podcast about your own material.

5 • Pomelli labs.google.com/pomelli

Type what you sell and get back ads, copy, images, and a content plan — a full first-draft marketing campaign in one shot.

6 • Gemini Canvas gemini.google/overview/canvas

A visual workspace for editing docs and code side by side with Gemini — like Google Docs with an editor sitting next to you.

7 • MusicFX labs.google/fx/tools/music-fx-dj

Royalty-free original music from a text prompt — background tracks for videos, podcasts, or reels.

Tools You'll Need

Just a Google account (free) and a browser — Chrome works best. All seven are web-based, no downloads.

Do This Today

- 01 Open NotebookLM and upload one PDF you've been meaning to read.
 - 02 Try MusicFX and generate a 30-second track for your next post.
 - 03 Open Stitch and design one app idea you've had in your head for months.
