

A field guide to Higgsfield inside Claude Cowork

Higgsfield Cowork Pack.

Nine skills that turn Higgsfield into a full content pipeline inside Cowork — UGC ads, reusable characters, URL-to-ad, overnight batches, and cinematic Instagram carousels.

READ TIME

5 minutes

The Problem

Cowork can read your files, run tools, schedule work, and write full reports — almost everything, except generate an image or video. The sandbox blocks outside AI generation tools entirely, so making a video ad meant bouncing between three apps and losing context every time.

THE FIX

Higgsfield connects as one MCP for every image and video model: SOUL builds your UGC actor, Nano Banana Pro renders the scene, Higgsfield Video stitches the clips — all inside Cowork, no bounce-out.

What's Inside

/setup-higgsfield-project

Run this first. Seven quick questions about your brand and defaults, then it writes a CLAUDE.md every other skill in the pack auto-reads — so you stop re-answering the same setup questions on every run.

/character-locker

Saves a UGC actor once so you reuse the same face across every ad — solves "character drift," where every fresh generation looks slightly different and your brand stops feeling cohesive.

/product-to-ad

The daily driver. Drop a product image, get back a UGC actor holding it, a script, and rendered video clips — saved to a folder, ready to post.

TRY IT

/product-to-ad: I dropped a photo of my new product in inputs/products/. Use [saved character]. Vibe is sarcastic and funny.

/url-to-ad

Paste any product URL — the skill scrapes the hero image and copy, then chains straight into the ad pipeline. Zero copy-paste between tabs.

/overnight-content

Set a campaign once and Cowork runs the full pipeline every night, rotating products, vibes, and characters. Wake up to a dated folder of fresh ads plus a morning report of what got made.

/ig-carousel

Six-slide cinematic Instagram carousel — the cover renders first, every other slide locks to that same visual world for a cohesive, editorial feel instead of a flat template.

The Stack You'll Need

Claude Cework *Free · claude.ai/download*

Cework mode handles all six skills.

Higgsfield *From \$9/mo · higgsfield.ai*

Generates the actor, scenes, and video. The Starter plan covers roughly 25–40 finished ads a month.

Higgsfield MCP *Free · inside Cework*

Settings → Connectors → Higgsfield. Toggle on, paste your API key — without it, none of the skills fire.

IF YOU ONLY REMEMBER ONE THING

Run `/setup-higgsfield-project` first. Then save a character with `/character-locker`. Every other skill in the pack gets better the moment those two are done.

Do This Today

01 Install the pack and run `/setup-higgsfield-project` to lock in your defaults.

02 Save your first character with `/character-locker`.

03 Run `/product-to-ad` on any product photo you have lying around.
