

A field guide to Claude Cowork

The 9 Skills Pack.

Nine Cowork skills worth installing in one shot — style systems, PDF guides, dashboards, and a couple of tools that keep the rest of your skill library honest.

READ TIME

5 minutes

What This Is

Nine Cowork skills, packaged as one installable file so you don't have to copy nine separate things one at a time. Drag the file into Cowork, click install, and all nine load at once — each one a specialist that shows up only when its trigger phrase matches, and stays out of the way otherwise.

THE CORE IDEA

One file in, nine skills out. You don't need to understand how plugins work — just drag, install, and start using them.

How to Install

1 Open Cowork

Any chat, new or existing, with Cowork mode on.

2 Drag in the .zip

Cowork reads what's inside and shows a preview card with all nine skills listed.

3 Install

One click. No restart needed — and it syncs to mobile automatically.

What's Inside

dashboard-style

The visual foundation every HTML output uses — locked colors, fonts, and card patterns so dashboards and reports come out on-brand instead of generic. Loads automatically whenever you ask for a report, briefing, or visual page.

find-skills

Answers "can Claude do this?" by checking your installed skills and the wider marketplace, then handing you install instructions if something exists.

visual-explainer

Turns a concept, process, or plan into a self-contained HTML page — useful for anything easier to show than describe.

pdf-guide

The skill behind guides like this one. Produces a polished, magazine-style PDF with a real cover, editorial typography, and prompt blocks — instead of a plain text dump.

TRY IT

Write a PDF guide for my clients explaining how to get the most out of our monthly calls. Keep it around 5 pages.

skill-dashboard

Scans your entire Cowork install and builds a searchable dashboard of every skill you have — name, description, and category, all in one browsable page.

skills-audit

Pairs with skill-dashboard: flags duplicate skills, overlapping tools, and anything safe to remove, with a health score and a short list of cleanup actions.

RUN THESE TWO TOGETHER

skill-dashboard builds the map. skills-audit reviews it and flags the problems. Run dashboard first, then audit, for a much better report.

end-of-day-summary

Reviews the day's work across your sessions, files, and connectors, and builds a short report of what got done, what's carrying over, and what today's focus actually was.

obsidian-daily-note

If you keep an Obsidian vault, this preps tomorrow's daily note before you close your laptop — pulls your calendar, carries forward open tasks, and flags follow-ups from recent meeting notes.

ig-carousel

Turns a topic or a video transcript into a cinematic Instagram carousel — a styled cover slide plus content slides, output as ready-to-upload images.

Making Them Yours

dashboard-style and ig-carousel walk you through a first-run setup asking about your brand colors, fonts, and voice. Beyond that, every skill ships as a plain SKILL.md file you can open and edit directly — swap the tone, the rules, whatever doesn't fit your work.

Do This Today

- 01 Install the pack — it takes about ten seconds.
 - 02 Run skill-dashboard so you can see everything you have.
 - 03 Try pdf-guide on something small, like a one-page client brief.
